PROFESSIONAL SUMMARY

Mechanical Design Engineer with 6 years of experience in automotive powertrain and body components design. Proficient in CATIA V5, NX, and FEA simulation. Strong GD&T knowledge from design perspective. Familiar with DFMEA concepts and DFM/DFA reviews but no hands-on ownership of quality systems (no SPC, PPAP, or CAPA). Looking to explore quality engineering or product development quality roles.

SKILLS

- Mechanical Design – Powertrain, Body Components
- CATIA V5 – Advanced
- NX 12 – Intermediate
- FEA (Finite Element Analysis) – Ansys, Nastran (Basic)
- GD&T – Advanced (design tolerance stacks)
- DFMEA – Participated, not owned
- DFM / DFA Reviews
- Material Selection – Ferrous and Non-Ferrous
- Engineering Change Management (ECM)
- PLM – Teamcenter
- No SPC, PPAP, Control Plan, or CAPA experience
- No supplier quality or auditing background

WORK EXPERIENCE

Design Engineer – Powertrain Tata Motors Limited – Engineering Research Center, Chennai
08/2018 – Present (6 years)

- Design and development of engine mounting systems and transmission housings for CV and UV platforms
- Prepare engineering drawings with full GD&T stack; review drawings for DFM compliance
- Participate in DFMEA sessions (facilitated by quality team); provide design inputs on failure modes
- Lead engineering change requests; manage change documentation in Teamcenter PLM
- Interface with suppliers during prototype tooling review — focus on design intent, not quality systems
- Attend APQP kick-off meetings as design representative; review design deliverables only
- No quality system ownership; no SPC, Control Plan, or CAPA ownership

EDUCATION B.E – Mechanical Engineering College of Engineering Guindy (CEG), Chennai
Anna University | Graduated: 06/2018 CGPA: 8.6 / 10

CERTIFICATIONS

- CATIA V5 Certified Associate – Dassault Systèmes (2019)
- GD&T Fundamentals – ASME Y14.5 – Completed online course, DY Patil Institute (2020)

ACHIEVEMENTS

- Designed transmission housing variant adopted across 3 CV models — reduced weight by 8%
- Led 5 engineering change requests to production without rework or field issues
- DFMEA contribution recognized: identified 2 high-severity failure modes during design review
